

Scenario 1 - test the search feature

Output

Sample Search Feature Test Cases

Test Case ID	Test Scenario	Precondition	Test Steps	Expected Result
TC_SEARCH_001	Search with valid keyword	User is on search page	Enter a valid product/item name and click Search	Relevant search results are displayed
TC_SEARCH_002	Search with partial keyword	User is on search page	Enter a partial keyword and click Search	Matching results containing the keyword are displayed
TC_SEARCH_003	Search with non-existing keyword	User is on search page	Enter a random keyword that does not exist and click Search	"No results found" message is displayed
TC_SEARCH_004	Search with empty input	User is on search page	Leave search box blank and click Search	Validation message appears or no search is performed
TC_SEARCH_005	Search with special characters	User is on search page	Enter special characters (@#%\$%^&) and click Search	System handles input gracefully without errors
TC_SEARCH_006	Search with numbers	User is on search page	Enter numeric values and click Search	Relevant results are displayed if supported
TC_SEARCH_007	Search is case-insensitive	User is on search page	Search using upper-case and lower-case versions of the same keyword	Same results are displayed
TC_SEARCH_008	Search with leading/trailing spaces	User is on search page	Enter spaces before and after keyword and search	Spaces are trimmed and

Test Case ID	Test Scenario	Precondition	Test Steps	Expected Result
				correct results are shown
TC_SEARCH_009	Verify search result relevance	Search data exists	Search for a valid keyword	Results are relevant and sorted as expected
TC_SEARCH_010	Verify search performance	Search data exists	Search using a common keyword	Results load within acceptable response time (e.g., <3 seconds)

Additional Test Scenarios

- Verify search suggestions/autocomplete.
- Verify recent search history.
- Verify filtering and sorting after search.
- Verify pagination of search results.
- Verify search behavior on mobile and desktop.
- Verify search with very long input strings.
- Verify SQL Injection and XSS inputs are handled securely.
- Verify search functionality when backend service is unavailable.

For a SAP Commerce application, I can also provide **detailed test cases in a QA template format (Test Case ID, Preconditions, Test Steps, Expected Result, Actual Result, Status)** if needed.

Output when ICEPOT is used

Context

Act as a Senior Test Engineer

Instruction

[MANDATORY] Generate testcases for Search feature

[MANDATORY] Generate only 10 testcases

[MANDATORY] Include Functional and Non functional

[MANDATORY] Include Postive and negative cases

Example:

TCID | Description | Priority|Preconditions| Steps |Expected Result

Persona

Act as a Test Manager to review the testcases

Output

Downloadable excel

Tone:

Professional Tone with clarity

OBSERVATION

Test case is provided in downloadable excel format.

Review notes mentions Test Manager perspective

Coverage details have been mentioned which includes functional positive, functional negative, non-functional positive, non-functional negative

- Add a single item to the cart.

- Add multiple different items.
- Add the same item multiple times.
- Add items with different variants (size, color, etc.).
- Verify cart count updates correctly.

Update Cart

- Increase item quantity.
- Decrease item quantity.
- Set quantity to maximum allowed value.
- Attempt invalid quantities (0, negative, non-numeric).
- Verify subtotal and total recalculate correctly.

Remove Items

- Remove a single item.
- Remove all items.
- Verify cart becomes empty and displays the correct message.

Pricing & Discounts

- Verify item prices match product pages.
- Apply valid coupon codes.
- Test invalid/expired coupons.
- Verify taxes, shipping, and discounts are calculated correctly.
- Confirm totals update after quantity changes.

Persistence

- Refresh the page and verify cart contents remain.
- Log out and log back in (if applicable).
- Close and reopen the browser.
- Test cart persistence across devices for logged-in users.

Inventory Validation

- Add an in-stock item.
- Attempt to exceed available stock.

- Verify out-of-stock items are handled correctly.

Checkout Integration

- Proceed to checkout from the cart.
- Verify cart contents transfer correctly.
- Navigate back and ensure cart remains unchanged.

Edge Cases

- Add and remove items rapidly.
- Test with slow network conditions.
- Open the cart in multiple tabs and verify synchronization.
- Test guest vs. authenticated users.

Mobile & Browser Testing

- Verify cart functionality on mobile, tablet, and desktop.
- Test across major browsers (Chrome, Safari, Firefox, Edge).

Expected Result

At every step:

- Cart contents are accurate.
- Prices and totals are correct.
- No errors or data loss occur.
- UI updates immediately and consistently.

If you're testing a specific website or application, I can create detailed test cases with steps, expected results, and priority levels.

Shopping_Cart_Test_Cases.xlsx

	A	B	C	D	E	F	G	H	I
1	TCID	Description	Priority	Preconditions	Steps	Expected Result			
2	CART_001	Add a single item	High	User is logged in	1. Open product page 2. Click Add to Cart	Item is added and cart count increases by 1			
3	CART_002	Add multiple items	High	User is logged in	1. Add 3 different items to cart	Cart count equals total number of added items			
4	CART_003	Remove an item	High	Cart contains items	1. Open cart 2. Remove Selected item	Item is removed and cart count decreases by 1			
5	CART_004	Update item quantity	High	Cart contains item	1. Increase quantity of an item	Cart displays updated quantity and totals			
6	CART_005	Add out-of-stock item	Medium	Product is available	1. Attempt to add out-of-stock item	Appropriate error message is displayed			
7	CART_006	Remove all items	High	Cart contains items	1. Remove all items from cart	Cart becomes empty and count displays 0			
8	CART_007	Add same item multiple times	Medium	Quantity limit is set	1. Add item multiple times 2. Logout and login again	System prevents excess quantity and shows error message			
9	CART_008	Verify cart contents	Medium	Cart contains items	1. Login and view cart	Contents and count are retained as expected			
10	CART_009	Validate cart after session timeout	Medium	Test data is available	1. Add items to cart 2. Logout and wait for session timeout	Items and count are retained after login			
11	CART_010	Validate cart after concurrent updates	Low	Same user is logged in	1. Update item quantity while another user adds items	System handles conflicts correctly without errors

Observation

1. Test case provide better coverage based on the input provided
2. Review by Test Manager
3. Test case is in excel downloadable format as mentioned in the input

Based on history, system also suggests below

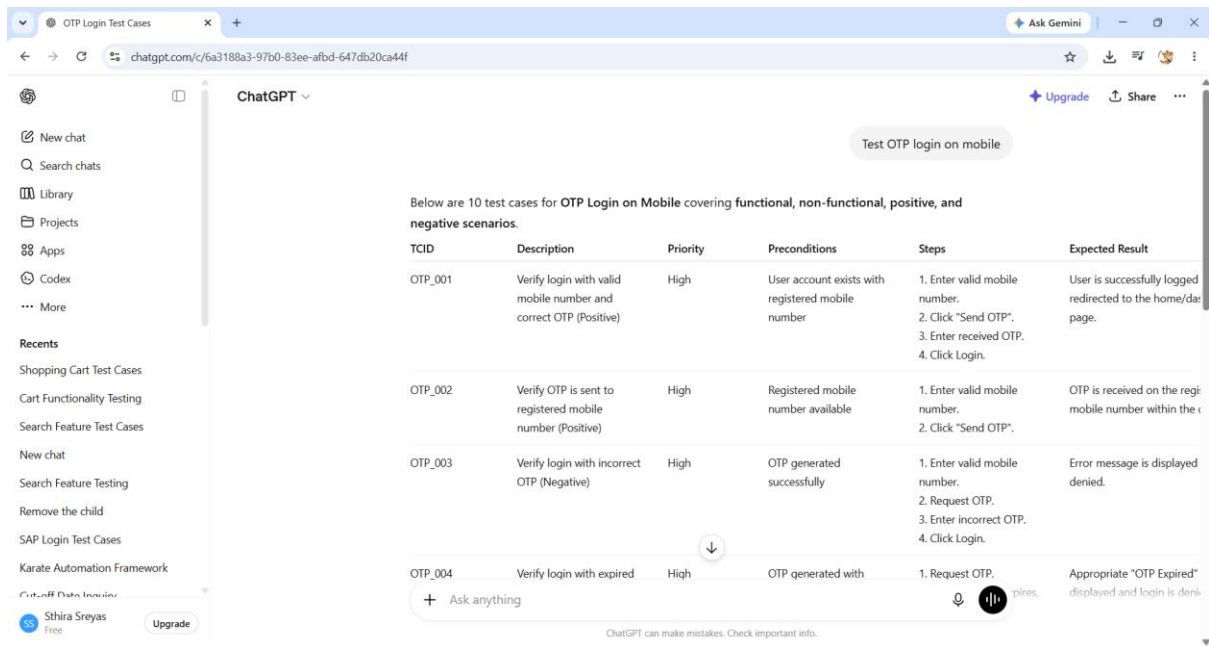

If you'd like, I can also provide:

- SAP Commerce-specific cart test cases
- Excel with additional columns (Actual Result, Status, Remarks)
- Test cases in RTM format
- Automation-ready test scenarios (Selenium/Karate/Cypress)
